

ARE YOU READY FOR

Internet-based Distance Learning?

**Is Your Computer Set Up To Display
The Kinds Of Documents, Sounds, And Graphics
Used In Many Web-Based Resources?**

Here's a quick way to find out!

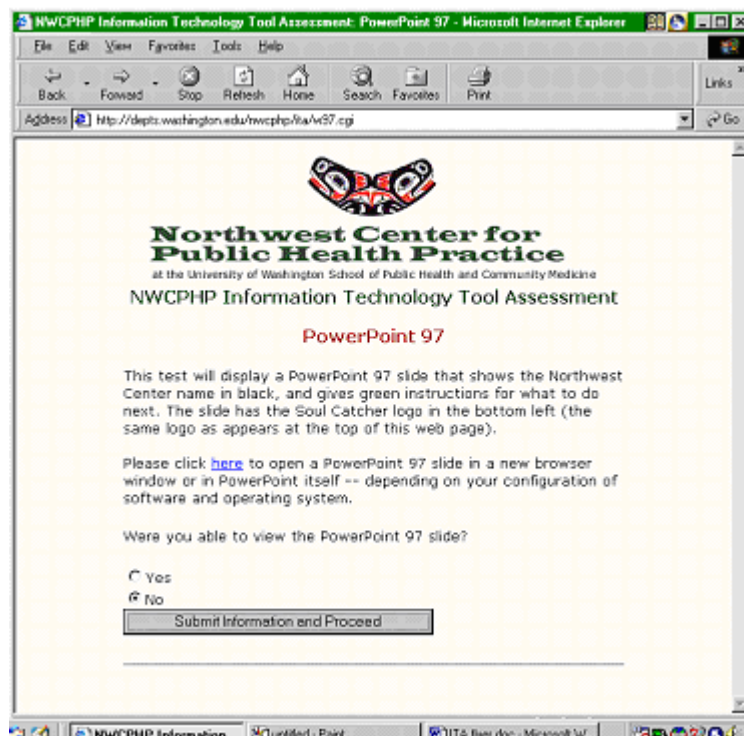

On behalf of our partners in the six-state northwest region (AK, ID, MT, OR, WA, and WY), the UW Northwest Center for Public Health Practice has developed a Web-based tool to help assess the capacity of public health workers in the region to receive distance-learning offerings over the Internet. The assessment takes about 10 minutes to complete, and it is easy and informative to use. Check it out at:

<http://healthlinks.washington.edu/nwcphp/ita/>

This tool gives each user a custom report about what capacities they do (or don't) have that might be relevant to Web-based distance learning (such as the capacity to read Adobe Acrobat documents or view RealPlayer video clips).

By doing this assessment,
you are also helping us and
our regional partners design
courses that will work on
your computer!

Each person who completes the on-line assessment provides the Northwest Center for Public Health Practice with anonymous information that will help us and our regional partners tailor the on-line learning resources that we are collectively designing and developing, to ensure they will be usable on the computers currently in use by the public health workforce in the NW region.

Thanks in advance for completing this assessment!
